

Torazo Tokuda

909-506-8393 | ttokuda@g.hmc.edu | github.com/Torazo5

EDUCATION

Harvey Mudd College

B.S., Intended Joint Major in Computer Science and Mathematics

Claremont, CA

Aug. 2026 – May 2030

United World College

IB Diploma 43/45

Singapore

Aug. 2024 – May 2026

EXPERIENCE

Quantitative Research Intern

Independent proprietary trader (private, Tokyo)

June 2026 – July 2026

Tokyo, Japan

- Built a Python pipeline evaluating three sentiment approaches (FinBERT, Twitter-trained BERT, LLM prompting) against price series for major crypto assets
- Tested predictive power via Pearson correlation and IC/ICIR; found no significant signal across most assets, isolating one anomalous XRP result as a candidate for further study

Robotics Team Captain

FRC(FIRST Robotics Competition)

Nov. 2023 – May 2026

Singapore

- Founded and led a 15-member rookie FRC team, securing **S\$10,000+** in funding across design, fabrication, electronics, and software
- Drove robot development end-to-end, coordinating subteams to deliver a competition-ready prototype on a hard deadline

Software Engineer Intern

Floramis

April 2024 – July 2024

Singapore

- Built a full-stack analytics feature (React, MongoDB, AWS) that modeled user interaction paths as trees to surface app usage patterns
- Shipped it internally, giving product and engineering teams user-flow data to drive feature decisions

PROJECTS

Prediction Market Research | Python, asyncio/WebSockets, scikit-learn, SQLite | [Site](#)

Jul 2026 – Present

- Two-venue arbitrage engine across 10 sport/esport families; \$100/day on simulated fills at \$25 max clip, capacity-limited by top-of-book depth.
- Parsed binary CS2 demos into round-state features; found real but sub-cost signal — **5.2¢**/trade gross, **-2¢** net after fees and slippage, 60% of the gap from exit timing.
- Developed weather and wallet-flow signals, beating the market forecast baseline by **0.53°F MAE** on untouched holdout data and analyzing **316,000** prediction-market wallets.

Autonomous Drone & Robotics Systems | Python, YOLOv8, OpenCV | [github](#)

Aug – Dec 2024

- Built and trained AI drones for autonomous navigation and precision landing (YOLOv8, OpenCV)
- Champion and runner-up at the Hyundai HMGICS Robotics Challenge; **S\$1,000+** in prizes

IB Spanish Practice Platform | Next.js, TypeScript, Whisper, Groq/Llama, Tailwind | [Git/Site](#)

Jan – April 2026

- Built an AI speaking trainer pairing a conversational agent with a separate evaluator model that scored learner speech and returned targeted feedback
- Added a generator for practice listening papers, filling a gap where no past papers existed for the Ab Initio syllabus
- Grew to **100 active users** at peak among students preparing for the exam

TECHNICAL SKILLS

Languages: Python, TypeScript/JavaScript, Java, C/C++, SQL, Bash

ML & Statistics: scikit-learn, XGBoost/LightGBM/CatBoost, PyTorch, SciPy; walk-forward validation, probability calibration (Brier, log loss, ECE)

Data: pandas, NumPy, DuckDB, Parquet, Polars, SQLite, Postgres

Systems: asyncio, WebSockets, REST integration, rate-limit/retry handling, RSA-PSS request signing, Git

Web: React, Next.js, Node.js, Flask, FastAPI, Tailwind
